Subject: Re: Carlton Place Arena CIR # 3

Leonel

I spoke with the structural engineer regarding your request for elevations of the various footings and have determined that this is not information that we can provide. We have identified the floor elevations. There are decisions that will affect the footings during the construction. The number of step footings and elevations may be determined by the excavation, the soil composition, bedrock etc. Also the elevation of the footings will be adjusted to reflect block coursing.

Sincerely,
Larry Gaines
